

Dear Parents and Carers

A parent has advised that their child may have been infected with threadworms. This is very common in children and can spread easily.

To help to prevent it spreading we are re-enforcing good hand washing in school and would encourage this at home as well.

To find out more please look at the NHS guidelines: <https://www.nhs.uk/conditions/Threadworms/>

If you have any questions please call the school office.

Thank you
